Subject: Notes on why partial stripping of plaster is an issue for us.

Hi Andy,

Thanks for the update

As you know I was very concerned by the proposal to only partially strip the plaster. My reasons are contained in the attached word document but are also because each builder has told us it's a very bad idea not to strip all the plaster.

It's Peter Finch the quantity surveyor who noted on his report that the damp running throughout the ground floor was more extensive than noted in the insurers report. This tied in with your findings I believe where you found significant areas of dampness on the day Peter attended. Peter Finch acts for Busby's a highly respected local firm if builders and he was extremely critical to me that this suggestion of partial stripping should have been made.

The house has now being sitting on sewage for over two months. I am as you know very concerned by the pathogens in the air. The stench that now runs through the house is unbearable due to the added stench of rat carcasses. The rat activity has been extensive and I suspect there is a real danger of the wiring having been compromised.

I would be grateful if we could speak again prior to you contacting Lizzy as I have some thoughts on how we might approach this.

Many thanks Andy.

Kind regards,

Nicholas
