Dear Andy,

Thank you for your note.

If we could also please request a complete list from Bio Response, in addition to the BER list, that would be very helpful.

Louisa and I have unfortunately both been hit with suspected Covid and, with the move tomorrow, I may be a little slower than usual in responding. Once we have both the BER list and the full list from Bio Response, I will come back to you in detail.

In the meantime, I will review the sewage contamination document and prepare a draft for you to hold and to discuss with Simon. Realistically, I expect to have this ready by Friday or, more likely, next Monday, as I want to ensure it is thoroughly considered once I am feeling better.

We are very keen to maintain momentum, so rest assured I will get this to you as soon as possible. Hopefully we can also move forward with Adam's appointment without delay.

Best regards,

Nicholas

Hi Nick,

Just a quick update on your claim.

I spoke to Simon yesterday, and he hasn't had a response from your insurance company, but this is likely due to his contact being on annual leave.

Simon has advised he will reach out to his contact this week regarding Adam's fees.

I will revert to Davies for the BER list stored with Bio Response. If there are other contents which are BER and are in your possession, please feel free to use the spreadsheet.

Regarding the sewage contamination document please feel free to send to me and I will forward to Davies.

Best Regards

Andy Lyne

Subject: Sewage contamination

Andy,

The attached report has been produced after exhaustive research and advice that I have sort. I think it makes a very convincing case for the disposal of all the materials affected by sewage. I hope it will stop us from continuing going round in circles on this issue.

I ran an independent report on the paper in response to a very neutral prompt.

Based on the arguments and evidence presented in the attached sewage contamination report, an insurer would likely find the case highly persuasive for full disposal and replacement of affected materials, especially given the rigorous documentation of pathogen persistence, vulnerability of occupants, and alignment with professional standards[1].

Persuasive Elements for Insurers

- The report details five months of sewage exposure, repeated aerosolisation, and direct venting from a main sewer, establishing comprehensive property-wide contamination[1].

- It cites authoritative standards (IICRC S500, NICEIC BS 7671, NHS/HSE) which mandate full removal and replacement of all porous materials and vented electrical components when exposed to Category 3 water, supporting a non-negotiable remediation stance[1].

- Medical expert testimony, specifically referencing Dr. Vanya Gant, reinforces the demand for hospital sterilisation standards and highlights the inadequacy of surface swab tests, strengthening the necessity for complete remediation[1].

- The discussion of long-lived pathogens (e.g., Ascaris, Toxoplasma gondii, Cryptosporidium, C. difficile, adenoviruses) provides scientific evidence that supports significant health risks and the impossibility of restoring safety through cleaning alone[1].

Compliance With Industry Standards

- The report's reference to IICRC S500, NICEIC BS 7671, and UK government health standards shows compliance with known guidelines for contamination and electrical safety, which insurers are typically required to observe[1].

- Explicit documentation of re-contamination events and reset of pathogen survival timelines demonstrates an understanding of risk assessment practices used by the insurance industry[1].

Vulnerable Occupant Consideration

- Highlighting the medically documented vulnerability of household members and citing physician instructions would increase the insurer’s sense of urgency and liability risk[1].

Scientific and Legal Justification

- The inclusion of well-documented scientific studies and WHO/CDC resources regarding pathogen survival reinforces the technical credibility of the risk claims[1].

- The articulation that swab testing cannot verify deep substrate safety is in line with the insurer's need for robust, risk-minimising action[1].

Overall Conclusion

If acting as an insurer, the weight of scientific data, reference to accepted remediation protocols, visible site evidence, and authoritative health and technical guidance presented in the report would be strongly persuasive and difficult to reasonably dispute

in the context of property insurance liability for sewage contamination[1].

If you agree with the contents let me know and I will send you the document formally for you to send to insurers.

Many thanks.

Best regards,

Nicholas
