Subject: Groundwater Risk and Ongoing Damp Conditions

Dear Andy,

Following our call, I just wanted to follow up.

Given that the building has been stripped back to structural shell and internal ground levels were only *6–9 inches above the water table in August*, the recent period of sustained rainfall creates a *credible risk of groundwater rise and ingress* if the property is left in its current condition.

The dampness now visible is consistent with a structure operating *close to groundwater equilibrium*. Leaving the building untreated and without active water management *materially increases the risk of further flooding and avoidable secondary damage*.

Best regards,
Nicholas
